About Our Company

The Roof Çelik Çatı company was established in Bursa in order to add a different dimension to the existing roof concept by the specialist engineers in 2017.

The Roof Çelik Çatı takes customer satisfaction, fast and quality service as its core principles to introduce the oval steel roof systems to Turkish market, which is highly preferred in abroad especially in Canada due to its low labor and material costs.

Roof Çelik Çatı Systems, has the understanding of a company that will not give up on its adopted rules with the company concept that gives importance to quality, with trust principle and quality understanding as yesterday and today, without giving up its principles forever while aiming to grow.

With the success of being the leading company of the market, Roof Çelik Çatı, which serves its customers in the best way, will continue to bring quality work to the customer in the fastest way and with labor savings thus will continue to grow day by day.

Products Used

Aluzinc / Galvalume

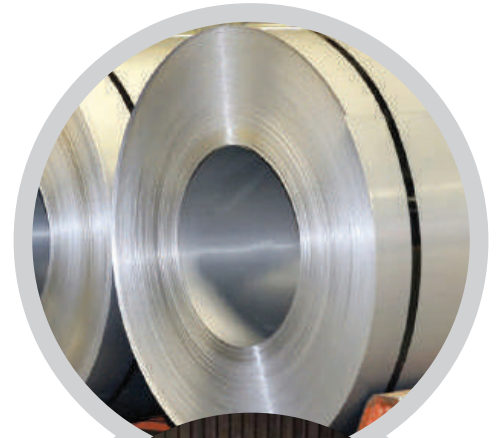

Excellent protective properties of Aluzinc against corrosion are reached by bringing together aluminum and zinc in the field of metallic coating. Its protection is obtained by forming a layer between the aluminum steel surface and the atmosphere and it provides long-lasting protection against corrosion by not dissolving in environmental conditions.

Galvanized Sheet

Cold rolled sheet called FH is obtained from DKP after rolling (thinning the sheet by pressing it from one side while it is stretched from the other side), in which the product gains physical and mechanical properties.

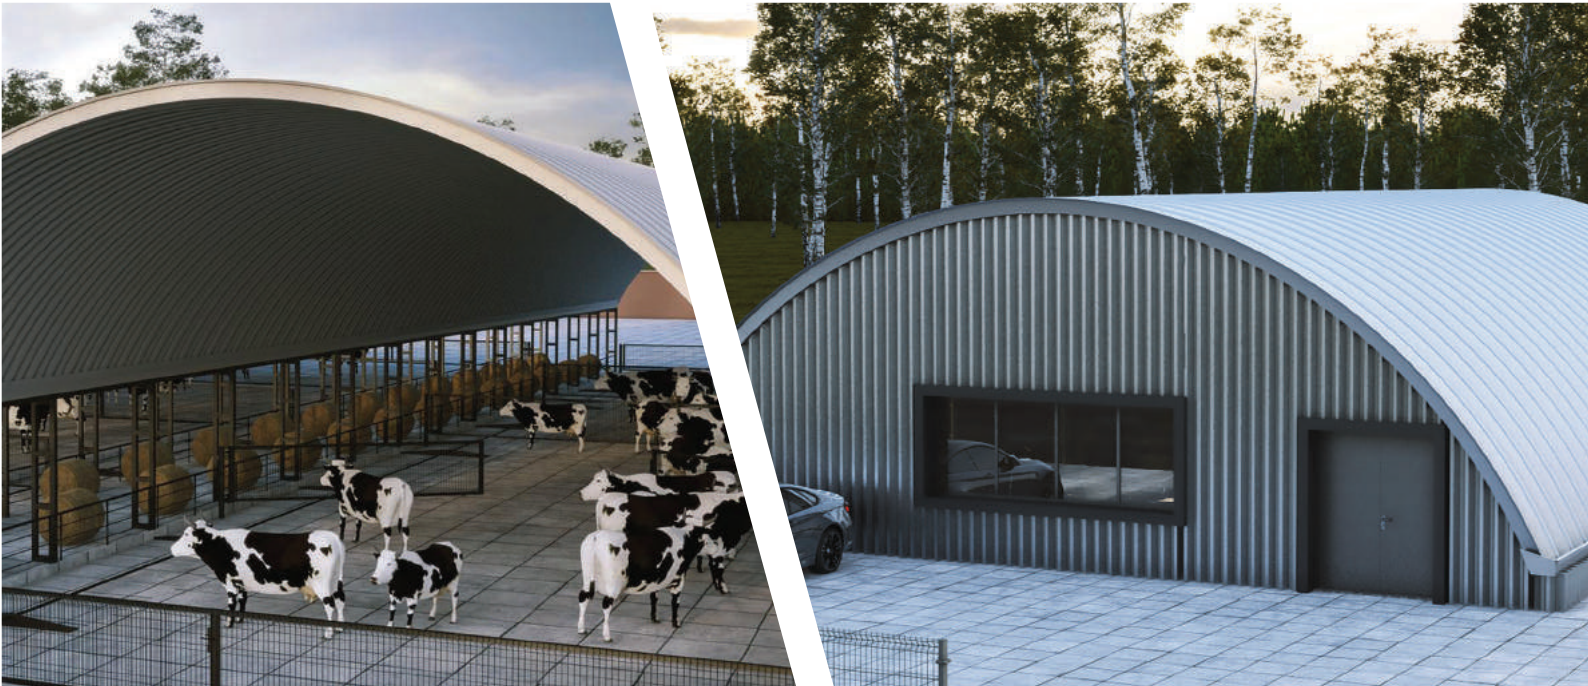

Painted Sheet

Painted sheets are obtained by processing cold rolled coils with polyester-containing paints after galvanizing coating in certain proportions. It is used with polyester-containing polish, as well as with Plastisol, Polyurethane and PVDF paint qualities. Painted sheets are preferred due to their resistance to corrosion, more decorative and aesthetically pleasing.

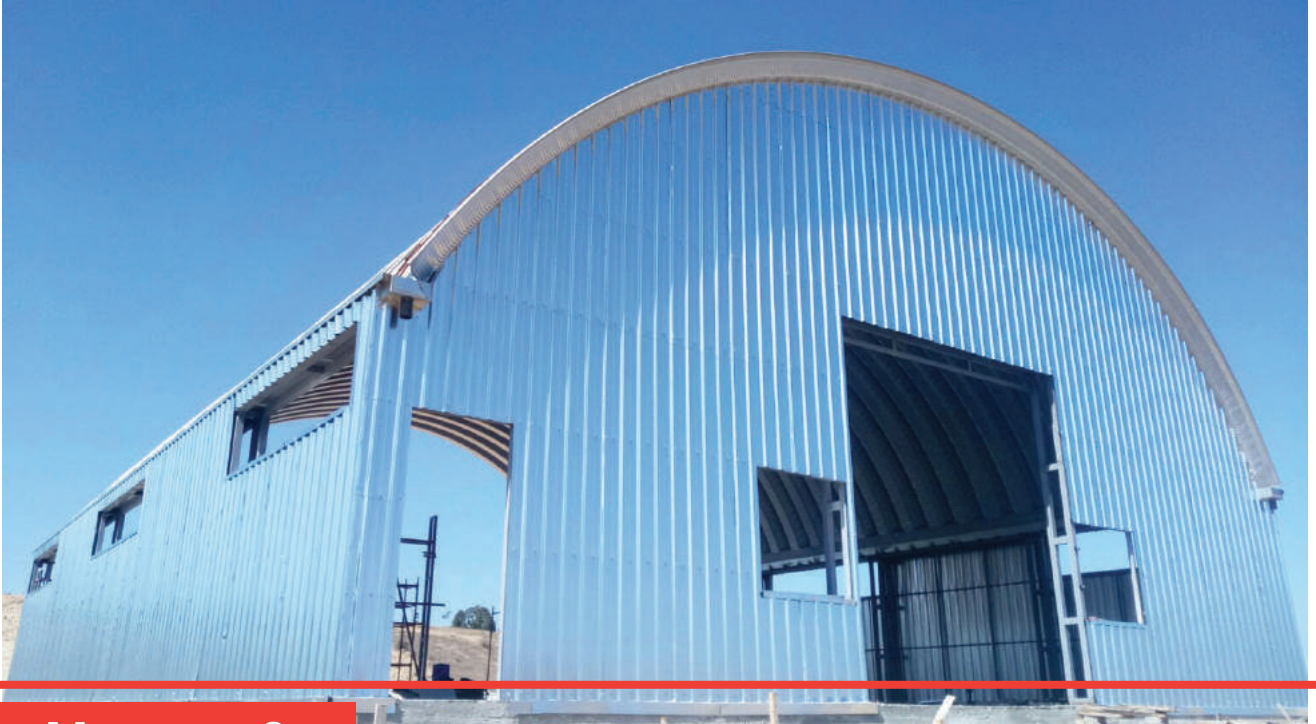

Why To Choose Roof Çelik

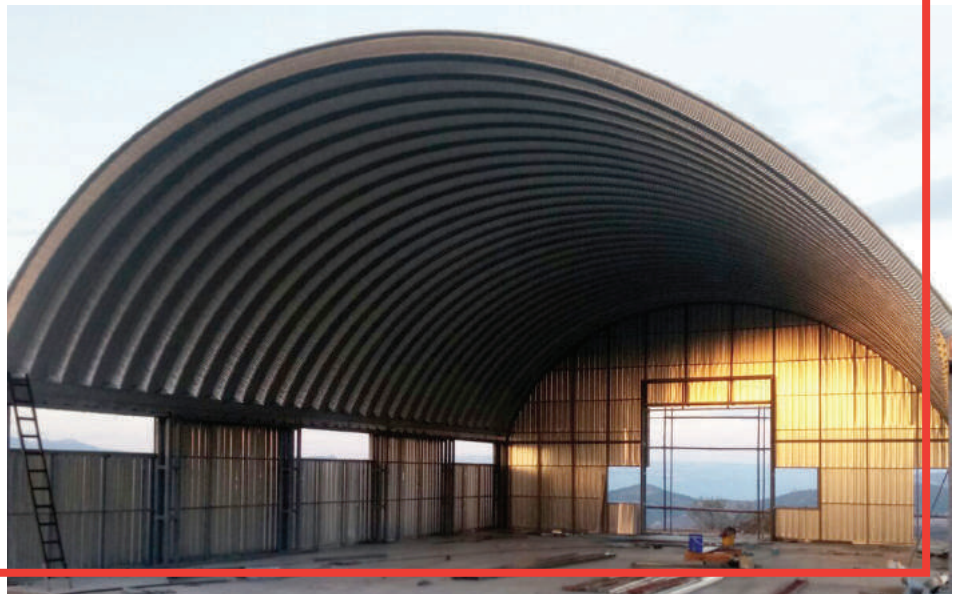

- ✓ It is cost-effective.
- ✓ It saves time in the construction phase.
- ✓ It helps save space by not using colons.
- ✓ It provides a spacious environment with the convenience of ventilation.
- ✓ It can be used in any custom projects.
- ✓ It's resistant to all kinds of weather conditions.
- ✓ It does not require maintenance and paint for a long time.
- ✓ Its practical structure allows it to be transported and assembled easily.
- ✓ It can be easily disassembled and re-assembled due to its light weight feature.
- ✓ Heat insulation can be applied with ease.
